

PROTECT

Stainless steel corner protection profiles for walls.

PROTECT is available as two different models:

1. The triple-edged profile.
2. The wall anchor profile.

Special features:

of the triple-edged profile:

- Lower risk of injury thanks to triple-edging.
- Clean finish – no problems with escaping silicone.

of the wall anchor profile:

- The undercut of the profile guarantees durable adhesion of the joint sealant between the profile and the tile.

PROTECT made of stainless steel.

Material and colour

Stainless steel

1.4301 (V2A) in fine ground finish and shiny

Areas of application

- Impact protection for corners of tiled or plastered walls.
- For use primarily in public areas, such as in the food and luxury food industries, in hospitals, swimming pools (dry areas), laboratories, canteens and industrial kitchens.

Advice for application:

1. The triple-edged profile.

This is affixed to the tiling with silicone or installation adhesive.

2. The wall anchor profile

The wall anchor comprises individual anchor clips and the corner protection profile. The anchor clips are available in different sizes to suit the various standard tile depths. The tiles are simply slid into the corner protection profile, secured to the wall and screwed into place (we recommend using two wall anchor clips per running metre), or alternatively affixed using standard installation adhesive.

Dimensions

Profile depth:

1 mm, 1,5 mm

Anchor base dimensions:

25 x 25 mm to 50 x 50 mm

Profile lengths:

200 cm, 250 cm
