

PRODECOR „T“

Joint end cover profile for subsequent installation on walls and floors.

PRODECOR "T" is a cover profile that is inserted into the joint between two types of flooring that have already been laid out and glued. The joint is filled with silicone, or alternatively with acrylic, and the vertical post of the profile is then pressed into the sealant (see FAQs – and our answers). This is a professional and aesthetically pleasing way to cover joints of different widths.

Special features:

PRODECOR "T" is a cover profile that is inserted into the joint between two types of flooring that have already been laid out and glued. The joint is filled with silicone, or alternatively with acrylic, and the vertical post of the profile is then pressed into the sealant (see FAQs – and our answers). This is a professional and aesthetically pleasing way to cover joints of different widths.
